                                                                                     Antibodies directed against the growth differentiation factor (GDF) are useful for detecting cell proliferative disorders when contacted with a specimen from a subject suspected of having a GDF-II associated disorder. Antibody binding constitutes a positive result. Detection is performed in muscle cells in vitro or in vivo. The antibodies may also be used in the treatment of such disorders by suppressing GDF-II activity. Antisense GDF-II reagents may also be used. Vectors are utilised in the treatment process e.g. colloidal dispersion systems such as liposomes which are target specific and either anatomically or mechanistically targetted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                        proliferative disorders, especially those involving muscle, nerve and adipose tissue. It was isolated from a murine genomic library using murine GDF-8 as probe. A full-length sequence (see AAV07555) encoding human GDF-11 (see AAV05458) is also provided. Claimed transgenic animals, especially bovine, porcine, ovine or avian animals, have been altered so that production of GDF-11 is reduced or completely disrupted. Such animals have higher than normal levels of muscle tissue, preferably without increased fat and/or chlesterol levels, and are useful as food products. The invention also provides methods for treating a muscle or adipose tissue disorder in an animal, including humans. A GDF-11 antibody, antisense molecule or dominant negative polypeptide (or a polynucleotide encoding a dominant negative polypeptide) can be administered to a patient to treat e.g. a muscle wasting disease, a neuromuscular disorder, muscle atrophy, obesity or other
                                                                                                                                                                                                                           This nucleotide sequence includes a region of an open reading frame that codes for the C-terminal portion (see AAM65459) of murine growth differentiation factor-11 (GDF-11), a new member of the transforming growth factor-beta superfamily that is associated with various cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         321
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              381
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    196
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               382 gecagtgegaatacatgtteatgeaaaagtateeacaeeacettggtgeaacaggeea 441
Transgenic animal growth differentiation factor-11 is inhibited - by insertion of transgene, also use of GDF-11 inhibitors for treating muscular wasting, neuromuscular disease, obesity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

```
The invention relates to a method for producing animal food products with increased ribs content. The method comprises: (a) introducing a transgene which interferes with expression of growth differentiation factor-11 (GDF-11), into an embryo: (b) allowing the embryo to mature; (c) crossbreeding the transgene-positive progeny; (d) processing these progeny to obtain the foodstuff. Modulators of GDF-11 are useful for treating acute or chronic renal disease, and various other muscle associated disorders or chronic renal disease, and various other muscle associated disorders disorders; adipose tissue disorders and immunologic disorders. The animal food product comprises large amounts of muscle and meagre amounts of fats and cholesterol, hence useful in treating obesity and related disorders. The present sequence represents a genomic DNA encoding a partial mouse
                                                                                                                                                                                                                                                                                                                                 Preparation of transgenic animal food product useful for treating renal and muscular disorders, comprises introducing transgene interfering with expression of growth differentiation factor-11 into embryo -
  'note "the start codon is not indicated"

A bovine genomic library (strain Bovine Activin WC) in lambda EMBL3
was screened under low stringency conditions with a 1081-1403 base
fragment of human BMP-7 DNA. Positive clones were screened with BMP-
5. -6, and -7 probes under high stringency conditions and one clone
reactive in the first screen but not in the second was selected. The
hybridisation characteristics were localised to a 0.5 kb fragment.
The partial sequence of this clone, lambda 7r-30 (ATCCD 75439) is
(79444. The 5' limit of this exon of the bovein BMP-11 gene is
difficult to define. Clone lambda 7r-30 contains at least one exon/
intron boundary. BMP-11 polypeptide exists as a dimer comprising two
intron boundary. BMP-11 polypeptide exists as a electrodimer with one
mature sequence from BMP-11 and the other being any of BMP 1-10.
The predicted mol. Wt. of the mature active species comprising two
mature protein sequences is approx. 12,000 daltons. Further active
species are contemplated comprising AAs 23-126. Primers C and D
are based on clone lambda 7r-30 (see 079446, Q79447). Nts 375 or

390-704 of Q79444 are claimed. AAs 18-126 of R66147 are claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                97 giccaigaacciaagggciactaigccaacticigcicaggccciigcccaiacciccgc 156

The BMP-11 protein may be useful for regulating folliclestimulating hormone (FSH), e.g. for the purpose of contraception or for inducing bone, cartilage and/or other connective tissue formation. The protein is produced by culturing the cells of transformed with the DNA followed by recovering and purifying the BMP-11 sequence from the

```
This sequence represents the coding sequence for the bovine bone morphogenetic protein-11 (BMP-11) of the invention. The human BMP-11 optyeptide (see AMW0817), mature human BMP-11, or its dimers with other inhibin-beta, inhibin-alpha or bone morphogenetic proteins are useful for inducing bone and/or cartilage formation, e.g. for bone, ligament or cartilage repair, wound healing or treatment of periodontal disease. BMP-11 may also be useful for regulating the production of follicle stimulating hormone, for contraception, to stimulate haematopoiesis, and to suppress the development of gondal tumours.
                                                                                                                                                                                                                                                                                                                                                                                      Bone-morphogenetic protein-11; BMP-11; inhibin-beta; inhibin-alpha; bone formation; cartilage repair; wound healing; periodontal disease; follicle stimulating hormone regulator; contraception; haematopoiesis; gondal tumour suppressor; therapy; cow; bovine; ds.

This is a partial nucleotide sequence of bovine activin WC, or bone morphogenetic protein 11 (BMP-11). The DNA was isolated by screening a bovine genomic library with a fragment of human BMP-7. The DNA probe and with a mixed BMP-5, BMP-6 and BMP-7 probe; the recombinant hybridised positively to the BMP-7 probe under reduced stringency conditions and exhibited weak or no hybridisation to the mixed probe under high stringency conditions. The clone includes an open reading frame encoding at least 126 amino acids (see an open reading frame encoding at least 126 amino acids (see an open reading frame encoding at least 126 amino acids (see in example of a novel family. BMP-11 proteins may be useful to growth factor beta superfamily. BMP-11 proteins may be useful to tissue repair, or for augmenting the activity of other BMP proteins. BMP-11 may also be useful for requiating the production of follicle stimulating hormone (e.g. for contraception), to 468 atcatcgctcctaaacgctacaaggccaactactgctccggccagtgcgagtacatgttt 527 atgcaaaagtatccgcacaccttggtgcaacaggct-----aacccaagaggc 578 Activin WC; bone morphogenetic protein 11; BMP-11; cattle; bovine; bone; cartilage; connective tissue; neuronal tissue; wound healing; tissue repair; vulnerary; contraceptive; transforming growth factor-beta; ds. agtgcagacacaaccacaggacggtgctgggactgtacaacactctgaacctgaagca 579 tctgcggggccctgctgcacacccaagatgtccccaatcaacatgctctact 633 Administration of human or bovine bone morphogenetic protein 11 = 217 totgcctcgccttgctgcgtgccccaggacctggagcccctgaccatcctgtact "putative 3' end of intron" Bovine activin WC (BMP-11) partial DNA sequence.
